

Deploying a report to JasperServer

Installation

Get a bundled distribution and run the installer. Choose default options and start the server

2 users are created:

jasperadmin / jasperadmin

to play

Implementation of production database

Install pgAdmin

Create a database, named for example sample

Run the supplied SQL script which inserts data into the database

Creating the data source in JasperServer

Connect with the admin user on JasperServer

Create a data source pointing to the previously created database.

Report creation

Create report

Add the resources used

Run report
