Using the table element

The aim of this lab is to familiarize yourself with the use of *tables* and *sub-DataSets*.

Description of the report

The report displays for each employee of the table *address* the orders he has managed in the form of a table.

The table groups the orders by *country*

It is made up of 4 columns: *Customer, Address, Postal Code, City*

Setting up

1. Define the structure of the main report as well as the main query
2. Place the graphic elements of the main report
3. Define a dataset that will display the data in the table
4. Insert the table, define the headers, the footers and the groupings of cells
5. Fill the cells with the desired data
